Blood Pressure Assessments for Patients with Prior Elevated Results

To assist you with patient care coordination, we are collaborating with Ingenios Health, a trusted health assessment company, to perform blood pressure checks on your Florida Blue BlueMedicareSM Medicare Advantage patients who have a diagnosis of hypertension and whose last BP is slightly elevated from the desired value of <140/90.

Often these patients may have controlled blood pressure readings when taken in a more relaxed setting, such as their home, or outside of a clinical office setting. If you have patients who meet this criteria and who would benefit from an in-home blood pressure check, please complete the [Ingenios request form](#) and fax your request before **December 27, 2018**.

Results will be mailed to your office from Ingenios for BlueMedicare patients who take part in this blood pressure assessment. Please be sure to include the blood pressure results you receive from Ingenios in your patients' medical records. We hope you will find this service helpful as you continue to care for your patients.
